

Claims

What is claimed is:

1. An apparatus for holding and handling a
5 plurality of remote control units, comprising:

a generally flat surface providing a mounting
section to which one or more remote control units are
placed perpendicular to the long axis of said surface.
Said surface is defined by two generally parallel sides a
10 perpendicular side and opposite to said perpendicular
side is a curved portion forming the boundaries of the
generally rectangular surface. An opposite bottom surface
is also then defined. In connection to the curved portion
extends a surface some distance into a plane at some
15 angle to form an upswept handle portion.

2. A remote control holder according to claim 1,
wherein: An opening is created through said handle
portion perpendicular to its plan.

20 3. A remote control holder according to claim 1,
wherein: Connective strips straps or adhesives are used
to attach said remote control units to said mounting
section.
